

Nicolas F. Spycher

Earth Sciences Division, Geochemistry Department
Lawrence Berkeley Laboratory, Berkeley, CA 94720
nspycher@lbl.gov

Staff Geological Scientist

ph. 510 495-2388
fax 510 486-7897

Education and Training

BA	Geological Sciences	1979	University of Geneva, Switzerland
MS	Geological Sciences (Geophysics)	1980	University of Geneva, Switzerland
Ph.D.	Geological Sciences (Geochemistry)	1987	University of Oregon

Research and Professional Experience

1998-present	Staff Geological Scientist, Lawrence Berkeley National Laboratory
1993-1997	Geochemist/Hydrogeologist, DBA AquaLogic (private consultant)
1988-1998	Senior Project Scientist, International Technology Corporation, Irvine, CA
1987-1988	Post-Doctoral Research Associate (Geochemistry), University of Oregon
1981-1987	Research Assistant (Geochemistry), University of Oregon

Research Areas

Dr. Spycher has over twenty years of applied research experience in aqueous geochemistry and water/rock/gas interactions, including the development and application of multicomponent geochemical and reactive transport models. His current research activities focus on developing biogeochemical conceptual and numerical models to understand water/gas/rock/sediment interactions in various types of subsurface environments. His specific research areas include water/rock interactions in geothermal systems, the impact of CO₂ geological sequestration on groundwater quality, U(VI) transport and reactive chemistry at contaminated DOE sites, metal cycling in contaminated lake sediments, and the study of coupled thermal, hydrological, and chemical processes related to nuclear waste geologic storage. He has also been working on the development of chemical geothermometry software (GeoT), gas solubility correlations for carbon dioxide sequestration and geothermal studies, and has developed and compiled thermodynamic data for use with geochemical models, including the aqueous speciation and surface complexation of various metals. He is part of the TOUGHREACT reactive transport simulator development team and has significantly contributed to the development of the CHILLER/SOLVEQ geochemical modeling codes. Besides his academic background, Nic has extensive experience in the field of environmental hydrogeology and hydrogeochemistry, including ten years of private-sector consulting experience dedicated to the remedial investigation of contaminated sites. His investigations included predicting the fate of metals, spilled fuels, and solvents in the subsurface using various field measurements and modeling techniques.
